reload ioctl on 566560c4c5c9 failed: Invalid argument device-mapper: dm-linear: Device lookup failed As i said, it only happend when i set the "architecture" for the base kernel. I can compile a kernel file without "architecture" and install the rootfs using ldconfig and everything works fine. Any ideas what i can do to get rid of this problem? i mean: i really want to use this device-mapper (to save the data from a sdcard in the ramdisk) and i dont want to live without it :/
